

MANAGED DETECTION AND RESPONSE

For many organizations, security is an either/or decision as need far outweighs available resources. The need for new technology is apparent, but not so the budget or experienced personnel. GoSecure offers advanced, cloud-delivered detection and response solutions backed by the hyper-experienced team from our Advanced Response Center.

GoSecure Managed Detection and Response allows you to choose the exact level of protection for your organization. By offering flexible combinations of features, GoSecure MDR helps you match budget with security. And, as your security needs change, you can easily move to a higher level of MDR.

SECURITY TAILORED FOR YOUR ORGANIZATION

GoSecure MDR allows you the flexibility to choose what you need today, but upgrade to more functionality as your security requirements change. And with each successive level of MDR, you get an increasing amount of monitoring and mitigation from the GoSecure Advanced Response Center.

By extending protection beyond the endpoint, GoSecure MDR is better able to protect against the latest advanced threats. Adding inbox and network detection and response capabilities to our MDR offering provides the highest level of visibility. The GoSecure Advanced Response Center then applies multi-observational analysis to understand “what it does” and “what it can do” to develop the best possible response.

WORKING TOGETHER TO MAXIMIZE EFFECTIVENESS

GoSecure MDR delivers the breadth of functionality required to protect every organization from today's advanced attacks. Every element is designed to work both independently, but also collaboratively with all others. And the GoSecure ARC is constantly operationalizing all interactions to maximize their synergistic interoperability.

Next-Generation Antivirus

Replace legacy antivirus solutions with the latest endpoint anti-malware technology to address emerging, fileless, memory-based attacks and more.

Endpoint Detection & Response

Leverage cutting edge threat hunting and machine learning to continuously monitor and observe all aspects of endpoint activity to mitigate attacks before they happen.

Inbox Detection & Response

Stop phishing and ransomware attacks in the email inbox before they ever reach the endpoint.

Proactive Threat Hunting

Not content with just reviewing alerts, the GoSecure Advanced Response Center uses alert data to deliver proactive threat hunting specific to your environment. As attack techniques change, it requires a team that understands how to connect the proverbial pieces to find the threats targeting your organization.

Multi-Dimensional Threat Intelligence

Threat intelligence is the foundation of all security operations. GoSecure combines threat intelligence from numerous sources, in addition to our own dedicated research, to create our proprietary multi-dimensional threat intelligence.

Context-Based Incident Response

Stopping attacks as quickly as possible is the goal of every security organization. By understanding the context of an attack, GoSecure MDR is able to quickly respond in the exact way necessary to mitigate the initial attack and set the stage to defend against future attacks.

Network Detection & Response

Proactively monitor and detect unwanted network traffic activity to identify and mitigate network compromises and internal attacks.

Insider Threat Detection & Response

Detect and eliminate malicious and unwanted behavior by employees and administrators to secure data and protect business reputation.

In-Memory Analysis

The only true in-memory threat detection, GoSecure In-Memory Analysis scans live memory, reverse engineers suspicious code and then predicts malicious intent.

GoSecure is recognized as a leader and innovator in cybersecurity solutions. The company is the first and only to integrate an Endpoint and Network threat detection platform, Managed Detection and Response services, and Cloud/SaaS delivery. Together, these capabilities provide the most effective response to the increased sophistication of continuously evolving malware and malicious insiders that target people, processes and systems. With focus on innovation quality, integrity and respect, GoSecure has become the trusted provider of cybersecurity products and services to organizations of all sizes, across all industries globally.
