

## SECURITY COMPROMISE ASSESSMENT

GoSecure Security Compromise Assessments identify ongoing and historical attacks potentially compromising IT infrastructure.

### THE MANAGED DETECTION & RESPONSE ADVANTAGE

According to a recently released report by IDC—Security teams continue to struggle to detect and respond to the most sophisticated and complex threats daily—and they must do so in a rapid and effective way to stop the threats before they become catastrophic.\*

Services like GoSecure Titan Managed Detection & Response (MDR) provide options for visibility and capabilities to respond to threats to keep up with today's evolving threat landscape.

When MDR is combined with the experienced team of analysts at GoSecure, organizations benefit from the ability to detect and mitigate threats faster across their networks, endpoints, web and email—limiting potential damage.

Learn how the MDR advantage can help find the hidden threats for organizations as part of a GoSecure Security Compromise Assessment (SCA).

### FIND THE HIDDEN THREATS

Threats can stay hidden for years waiting to compromise the IT infrastructure of an organization. Even the best antivirus and firewall protection can't provide complete coverage for an organization. Ransomware, malware and other threats can be concealed, looking for an opportunity to:

- Steal important information
- Spread malicious code
- Encrypt critical files
- Disable crucial systems

The **GoSecure Security Compromise Assessment (SCA)** combines 60-days of best-in-class monitoring from GoSecure Titan Managed Detection & Response with human threat hunting from the GoSecure Active Response Center (ARC) team to deliver a comprehensive evaluation of the potential, current and historical threats across environments. An SCA can also help organizations identify steps to fortify defenses for the future.

GoSecure will design the SCA engagement based on client needs and the environment. The SCA will typically include:

Endpoint Detection & Response (EDR)

Network Detection & Response (NDR)

Next Generation Antivirus (NGAV)

Through the GoSecure partnership approach, the Active Response Center (ARC) becomes an extension of the client team during an engagement. As soon as a threat is detected, GoSecure provides recommendations to respond.

Organizations that have experienced a breach or who want to know if they are at risk will get the comprehensive analysis needed to understand if there are ongoing threats or historical indicators of compromise through an SCA.

### ABOUT GOSECURE

GoSecure is a recognized cybersecurity leader and innovator, pioneering the integration of endpoint, network, and email threat detection into a single Managed Detection and Response service. The GoSecure Titan platform delivers predictive multi-vector detection, prevention, and response to counter modern cyber threats. Titan MDR is designed to detect and respond in less than 15 minutes, delivering rapid response and active mitigation services that directly touch the customers' network and endpoints. For over 10 years, GoSecure has been helping customers better understand their security gaps and improve their organizational risk and security maturity through MDR and Advisory Services solutions delivered by one of the most trusted, skilled and experienced teams in the industry.
