

## SPECIALTY PENETRATION TESTING SERVICES

Go Beyond Traditional Security Testing with Specialized Engagements from the Trained and Experienced Team at GoSecure

When traditional Penetration Testing services aren't enough to address the threats from today's advanced attackers, consider the range of comprehensive specialty testing services available from the certified team at GoSecure.

Most security testing focuses on your internal and external networks, as well as some critical applications and device security. At GoSecure, we've got the training, skills and experience to go farther.

### CLOUD TESTING

Cloud technology has evolved rapidly but security testing capabilities have not kept pace with the need to ensure that this important infrastructure is secure. The highly trained and experienced team at GoSecure offers tailored testing programs for **Amazon Web Services, Google Cloud** and **Microsoft Azure**. We work with each client to design a program based on their environment, taking one of three approaches based on the needs of the client:

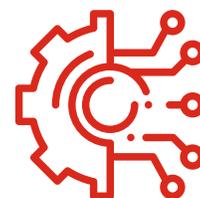

- Externally Focused
- Virtual Private Servers (VPS) testing
- Tenant Assessment

Our team delivers a detailed report with easy to understand, actionable insights to help address the risks and gaps we identify.

### SAP TESTING

Some of the most sensitive data any organization possesses can be found in their enterprise resource platform (ERP), but it's rarely subjected to security testing. A breach of your **SAP application** can compromise sensitive HR data, inventory, financial information, etc., or be the gateway to allow a malicious threat into the infrastructure of your organization. GoSecure can help protect this valuable asset with our SAP testing program. Working in collaboration with the client, we can:

- Simulate both authenticated and non-authenticated attacks
- Test various levels of access (agreed on in advance with the organization)
- Review custom modules and related application permissions

GoSecure has one of only a few security testing teams in the industry with the training and expertise to deliver a custom SAP testing program based on your implementation of the application. SAP testing reports contain a full documentation of the engagement process and identified issues, including screenshots of exploits, and recommended remediations.

## IOT DEVICE TESTING (EMBEDDED, INDUSTRIAL AND SCADA DEVICES)

These categories of device testing require differentiated approaches to ensure successful testing and to protect your valued devices.

- **Embedded Device Testing** from GoSecure includes both the physical asset testing, as well as code testing. While most organizations will have the skills to test the traditional IT components involved in embedded devices, our team can test the electronics, enclosures, etc. which results in the ability to test all layers of the device.
- Industry-specific and **Industrial Devices** can be compromised if not properly protected and the threat actors targeting these systems are typically highly sophisticated. Testing for these devices requires a specialized approach. At GoSecure, we have the necessary experience and will conduct a thorough testing program.
- For **Supervisory Control and Data Acquisition (SCADA) Device Testing**, we understand that data acquisition systems, logic controllers, human-machine interfaces, among others, must all be tested. They can be entry points for bad actors to compromise entire systems. Our team has the knowledge, training and skills to test these important devices.

We've got experience across manufacturing, banking/financial, power/utilities, and other key industries to conduct the specific tests needed to help ensure your IOT devices are secure.

These great testing options are available individually or as part of your comprehensive testing program from GoSecure. All our tests are tailored to your organization and custom-designed by our certified team. Want to learn more about our full range of security testing offerings? ### ABOUT GOSECURE

GoSecure is a recognized cybersecurity leader and innovator, pioneering the integration of endpoint, network, and email threat detection into a single Managed Detection and Response service. The GoSecure Titan platform delivers predictive multi-vector detection, prevention, and response to counter modern cyber threats. Titan MDR is designed to detect and respond in less than 15 minutes, delivering rapid response and active mitigation services that directly touch the customers' network and endpoints. For over 10 years, GoSecure has been helping customers better understand their security gaps and improve their organizational risk and security maturity through MDR and Advisory Services solutions delivered by one of the most trusted, skilled and experienced teams in the industry.
