A GoSecure Threat Intelligence Maturity Workshop will provide the insights you need to move forward with confidence. Whether you’re unsure how to get started with threat intelligence or you’re actively seeking a higher level of threat intelligence capabilities, understanding your organization’s vulnerabilities is the best way to quantify your real risk and successfully guard against internal and external threats.

WHAT YOU CAN EXPECT?

During your four-week Threat Intelligence Maturity Workshop, GoSecure security experts will partner with your team to understand your organization’s position on the path from a reactionary security program to a proactive, threat-informed security program. Our approach is similar to the Capability Maturity Model (CMM) for developing and refining an organization’s processes.

We will establish a tiered roadmap that clearly outlines what improvement will look like in the short, medium and long-term. And, we will help your team create a plan to mitigate your organization’s risks and exposures as it moves from one milestone to the next. Understanding your Threat Intelligence program’s maturity will help you:

- Prioritize remediation of vulnerabilities
- Identify and prioritize alerts
- Validate security controls
- Advance security programs from manual ad-hoc to automated programs that actively respond to the changing threat landscape
- Operationalize intelligence important to your organization
- Inform strategic and tactical business related to security and risk

The FBI Internet Crime Report for 2021 indicated a record number of complaints were received (847,376) with potential losses exceeding $6.9 billion. The top complaints included ransomware, business e-mail compromise (BEC) schemes, and the criminal use of cryptocurrency.¹

GOALS OF GOSECURE THREAT INTELLIGENCE MATURITY WORKSHOP

During your workshop, GoSecure security experts will work with your team to review and assess:

1. The current makeup of your team.

2. Whether intelligence data is processed and organized in a way that the entire team can understand?

3. What your team currently considers to be intelligence and whether they understand and operate under “Intelligence Requirements”?

4. Whether they get their intelligence from email, news articles, dedicated open source feeds, closed/paid feeds or other sources?

5. What they do with this intelligence and how it informs strategic/tactical decisions?

6. How your team operationalizes IOC’s and finished intelligence reports?

7. What critical functions need to be protected and how intel can inform those controls?

8. The relationship between intel and the business.

9. What is most important to your organization’s decision-makers, such as responding to cyber news events and threat actors, managing breaches, or responding to patch releases?

WHO CAN BENEFIT?

GoSecure workshops are beneficial for any organization that is serious about implementing a security framework (especially MITRE ATT&CK!). A Threat Intelligence Maturity Workshop can help you understand the threats your organization faces on a daily basis, prioritize remediation and incident response, and create a plan for maturing your Threat Intelligence program.

THE FINAL RESULT

Your team will leave the GoSecure Threat Intelligence Maturity Workshop with a renewed sense of purpose and a shared focus on how it will make critical business and risk decisions going forward. This includes a solid understanding of your organization’s current state of visibility, how it is gaining intelligence, monitoring and analyzing threats and alerts and the actionable steps your team will take to mature your organization’s Threat Intelligence program.
