

## Overview

Release 11.0 contains updates, including reports and notifications, for the integration with EdgeWave ThreatCheck. EdgeWave ThreatCheck is an advanced phishing system that analyzes and removes malicious messages in real time, alerting end users on the status of the suspicious email and increasing security awareness all the way to the end user. Currently, EdgeWave ThreatCheck is only available as beta.

There are also a few bug fixes.

## New Features and Enhancements

- EP-15137 Report that shows submitted ThreatCheck messages and results
- EP-15139 ThreatCheck notifications
- EP-15234 ThreatCheck charts
- EP-15200 Add ability to select AV engine to use
- EP-15249 Add Markup option to SPF filter
- EP-15274 Skip reverse DNS check for Microsoft servers

## Bug Fixes

- EP-15188 Some domain and mailbox settings do not work intermittently
- EP-15213 Prevent two brands from using the same Office365 shared outbound IP port
- EP-15267 Check/Uncheck Enable fuzz protection does not enable Reset Section/Update Section buttons
